ServerSync Bukkit

ServerSync Bukkit

Server Sync

About

ServerSync allows you to sync data from your favorite plugins (i.e. Vault) across all of your BungeeCord Servers with no shared files, setup or integration. ServerSync will determine what updates need to be communicated to the other servers and will update them using the plugins API, ensuring the updates are done properly!

Features

- **Data Sync** - Sync data from supported plugins across all of your Bungeecord network servers without sharing, moving or accessing files. ServerSync uses the plugins built in API's to ensure proper and efficient data access and transmission. This is an extremely unique data sync approach for Bukkit & Bungeecord
- **Smart Memory Usage** - Syncing large amounts of data across servers can be a real drain on memory usage. ServerSync keeps track of when data changes and only syncs what needs to be changed. This provides a minimal impact on server resources, ensuring your data is always in sync and server is never lagging.

Dependencies

- [ServerSync Bungeecord](#) - This acts at the relay for ServerSync which is installed on your BungeeCord Hub
